

ADJUSTABLE STABILIZER PEDESTALS

Black

801900 - €24.09 (PPHT)

PRODUCT DESCRIPTION

The stabilizing pedestals allow a tray to be raised and wedged quickly.

They are made from 99% recycled plastic. They offer a small footprint at the base (105 mm) and thanks to the bi-injection foamed plastic ball joint they guarantee excellent stability.

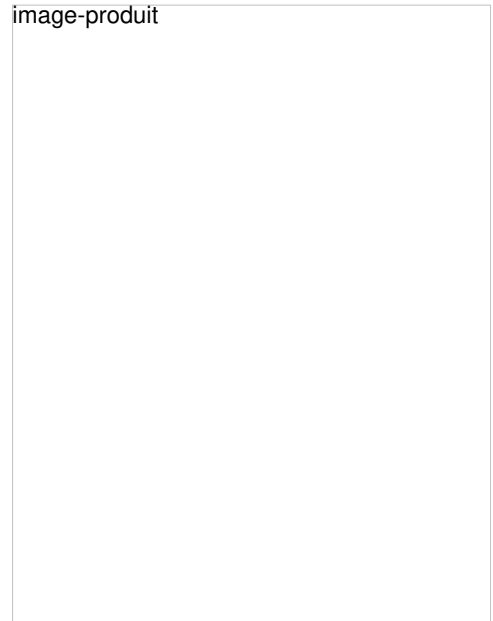

Each leg supports 300 kg: from 68 mm to 125 mm (161 mm with extension).

Non-slip and self-locking, these pedestals are adjustable in height from 68 mm to 125 mm. Their graduation is visible to facilitate their pre-setting to blank.

The number of studs to be placed depends on the size of the recipient (refer to the instructions).

The studs are sold in sets of 4.
